Xcelplus Renews Energy

To whom it may concern,

I have owned my silver 2000 Toyota Echo auto 1.3 L 4-cylinder 3 door hatch since 2004/5: It has always been very fuel efficient.

In early 2016 with ~220,000 km on the odometer I added Xcelplus Engine Treatment. The car became more responsive, the engine was noticeably smoother and quieter, and my impression was that it was using less fuel (I didn't have to refill so often)

In January 2018 we added one bottle of the Xcelplus Top End Treatment (aka 2-Stroke Treatment) to the fuel and the running of the engine improved further.

In November 2019 (269,000 km) we added the Sludge Out engine cleaner to the engine and drove around for 29 km to remove additional varnish and carbon prior to doing an oil change. After the oil change, we added a bottle of the Ring Free oil additive (an oil treatment) to reduce friction and to clean the engine further. The engine runs even better after the extra cleaning and lubrication.

Xcelplus renews the energy in old cars and it rescues them.

Xcelplus is a great product and I have no hesitation in recommending it to anyone.

Yours sincerely

Peter McDonald
